Identifying compounds for treating inflammatory or degenerative brain diseases, comprises testing the compound for its capacity to modulate or mimic Monocyte Chemoattractant Protein-1 binding with a chemokine receptor

Disclosure; Fig 8; 45pp; English.

The invention relates to identifying a candidate drug compound comprising testing the compound for its capacity to modulate or mimic Monocyte Chemoattractant Protein-1 (MCP-1) binding with a chemokine receptor

```
capable of being expressed on brain glial cells and is known in the mouse as L-CKP or in humans as CRAM-B. The chemokine receptor expressed in a cultured cell comprising the cell transfected with a nucleic acid and a HEK cell, is useful in identifying a candidate drug compound for treating linflammatory or degenerative brain disease, e.g. ischaemta, Alzheimer's disease or multiple sclerosis. The agonist or antagonist is useful in the preparation of the pharmaceutical composition useful in treating enroded envelophalitis and chronic obstructive pulmonary diseases and obstructive airway diseases uch as allergic alrway diseases uch as allergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   840

Claim 151; SEQ ID NO 1457; 542pp; English

pectoris, Parkinson's disease.

The invention relates to human and mouse G protein-coupled receptors (GPCR8) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of erreating, preventing or disgnosing diseases of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic compounds useful in the treatment of GPCR-related diseases; a transgenic compounds useful in the treatment of GPCR-related diseases; a transgenic comparising a mutation in a different GPCR gene of the invention; and kits comprising substantion in a different GPCR gene of the invention in the comprising several mice, each of which has a mutation in a different GPCR gene of the invention. The invention further discloses variants of the GPCR polypetides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of diseases including neurological disorders (e.g., Alzhimier's disease, distributed, disease or schizophrenia); dispersation, diabetic neuropathy, Perkinson's disease or schizophrenia); dispersation, diabetic neuropathy, perkinson's disease or schizophrenia); crown's disease, diarrhoea, food poisoning or intratable bowel syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or more and joint disorders (e.g., obtocarthitis, rheumatoid arrhitis, and disorders (e.g., obesity, enzyme deficiency-related diseases or vitamin deficiency-related diseases). diseases); and disorders of the kidney, liver, lung, breast, ovary, uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and thyroid (e.g., cancers). The present sequence represents a GPCK-encoding nucleic acid of the invention. Note: The full sequence data for this patent did not form part of the printed specification; those sequences not shown were obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention relates to a non-human transgenic animal having targetted G -protein coupled receptor (GPCR) gene disruptions in melanocortin-3 gene -protein coupled receptor 9A gene, glucocorticoid induced receptor Gene, orphan GPR15 gene, orphan GPR14 gene, orphan GPR15 gene, creansgenic animal is useful for identifying an agent that medulates the transgenic animal is useful for identifying an agent that medulates the expression or function of the target gene, for identifying an agent that amountains on succession or function of the target gene, for identifying an agent that amountains or function of the target gene, for identifying an agent that amountains or construct is useful for producing a transgenic animal.

The transgenic construct is useful for producing a transgenic animal, the farget gene. The transgenic animal is useful for profucing a transgenic animal is useful for profucing a transgenic animal is useful for diseases, such as neurological, neuropsychological or psychotic illnesses. The transgenic animal is also useful as models for diseases, disorders or conditions associated with phenotypes relating to a disruption in a target, and to identify pharmaceuticals, therapies, conditions which may be effective in treating a disease or the expression of the target gene is useful as a therapeutic for treating the conditions associated with a disruption of the target gene is useful as a therapeutic for treating conditions associated with a disruption of the target gene is useful as the target gene. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequence is mouse GPCR beta chemokine receptor (E01) gene

has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises an isolated nucleic acid molecule comprising at least comprises an isolated nucleic acid molecule comprising at least the specification or its complement and encoding any one of the amino the specification or its complement and encoding any one of the amino can acid esquence given in the specification; an antibody that specification and which as pecification; an isolated polypeptide comprising an SNP given in the specification and which is between the containing an SNP given in the engeth; a kit for detecting an SNP in a nucleic acid molecule, a buffer and an enzyme; a method of detecting an SNP given in the engeth of a cidencial infarction and an enzyme; a method of detecting an SNP given in the myocardial infarction. The novel detecting a variant polypeptide; and myocardial infarction and increased or detecting a method is useful in identifying an agent useful in treating or preventing an enthod is useful in identifying myocardial infarction and for preparing a method is useful in identifying myocardial infarction and for preparing a method is useful in identifying an approximation and for preparing a method is useful in identifying myocardial infarction and propagating and processed in the invention may be used in gene therapy. The method is useful in identifying myocardial infarction and for preparing a method is useful in identifying myocardial infarction and processed or processed in the processed in the processed or processed in the processed or proc

The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic acid molecule comprising at least a contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino acid sequence given in the specification; an antibody that specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid, comprising the polymucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting an SNP in a method for identifying an agent useful in treating or preventing and an enthod for identifying an agent useful in treating or preventing.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This polynucleotide sequence represents a human myocardial infarction. This sequence containing one or more SNPs of the invention. Note: This sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism in

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide expression, comprising any of the 27,400 fully defined nucleotide according at least 8 amino acids of any of the 6888 amino acid sequences concing at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that thyridates under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human cells or the plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon addressably isolatable or amplifiable from the plurality), a single con addressably isolatable or amplifiable from the plurality), a single con according human gene expression, a wector comprising at least 8 contiguous amino acids of any of the above- mentioned amino acid sequences (optionally with conservative amino acid aubstitutions), an isolated antibody that binds specifically to a peptide cited above, and/or licensing single exon probes or methods of solating and/or licensing single exon probes or methods and expression a method of providing human gene expression data by subscription, and a computer-readable storage medium which contains a database having a plurality of records cated above. The probes may be used as tools for surveying expression analysis. The probes may be used as tools for surveying

tissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising smaller genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded paptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           249

ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to ABB85003. The PRO proteins and polymucleotides have cardiant, cytostatic, antianglogenic, hypotensive, vulnerary and antiarteriosclarotic activities, and can be used in gene therapy. The PRO polymucleotides, proteins, agonists and antegonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polynucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88259 to ABL88267 represent primers and probes used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Paoni NF;

```

The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovasecular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or angiogenic disorders in a mammal. Paoni NF rber H, Gerritaen ME, Goddard A; Hillan KJ, Marsters SA, Pan J, Williams PM, Wood WI, Ye W; Gerber H, Claim 1; Fig 15; 567pp; English. PJ, Gurney AL, JF, Watanabe CK, P-PSDB; ABB95430

The nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antagonist, is used to treat a cardicovascular, endothelial, or angiogenic disorder in a mammal, preferably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy is characterised by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial cell growth in a mammal. PRO21 or an agonist is used to induce cardiac hypertrophy. PRO1376 or PRO149 is used to stimulate angiogenesis. PRO4302 or an agonist is used to induce cardiac hypertrophy given in the superfication, or an agonist is used to polypeptide, given in the specification, or an agonist is used to stimulate angiogenesis. A PRO polypeptide, given in the specification, or an agonist is used to stimulate or inhibit smooth muscle cell growth, or to induce endothelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid encoding a secreted and transmembrane polypeptide for treating a cardiovascular, endothelial, or angiogenic disorder in a mammal, such as cancer or age-related macular degeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Stephan JF;

The invention relates to an isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antegonist, is used to treat a cardiacular, endotholial, or anglogenic disorder in a mammal, or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy is characterised by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial call growth in a mammal. PRO149 is used to inhibit or alimilate endothelial chypertrophy. PRO136 or PRO149 is used to stimulate angiogenesis.

PRO4302 or an agonist is used to induce endothelial cell apoptosis. A PRO polypeptide, given in the specification, or an agonist is used to induce endothelial cell tube formation. The present sequence represents a cDNA encoding a

The invention relates to an isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antagonist, is used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, cardiovascular, endothelial, or angiogenic disorder in a mammal, cardioratrophy, trauma, a cancer, or age-related macular or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy properties by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial chypertrophy. PRO1376 or PRO1449 is used to simulate angiogenesis. Chypertrophy. PRO1376 or PRO1449 is used to simulate angiogenesis. PRO4302 or an agonist is used to induce endothelial call under or inhibit smooth muscle cell growth, or to induce endothelial cell tube formation. The present sequence represents a cDNA encoding a PRO polypeptide of the invention.

New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO205 or PRO214, useful in molecular biology, chromosome and gene mapping, in generating antisense RNA and DNA, and for treating disorders involving

Claim 2; SEQ ID NO 15; 492pp; English.

The invention relates to an isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antagonist, is used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, preferably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy is characterised by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial call growth in a mammal. PRO31 or an agonist is used to inhibit cardiac. Hypertrophy. PRO3376 or PRO349 is used to stimulate angiogenesis. PRO4302 or an agonist is used to induce endothelial call apoptosis. A PRO polypeptide, given in the specification, or an agonist is used to induce endothelial call tube formation. The present sequence represents a cDNA encoding a call tube formation. The present sequence represents a cDNA encoding a control or an agonist of the invention.

The invention relates to human PRO polypeptides and the PRO polymucleotides encoding them. The invention also relates to treating cardiovascular, endothelial or angiogenic disorders in mammals, inhibiting endothelial or angiogenic disorders in mammals, inhibiting endothelial or all growth, stimulating endothelial cell growth, stimulating endothelial cell growth, stimulating endothelial cell growth, stimulating endothelial cell growth, stimulating angiogenesis or smooth muscle cell growth by administering polypeptides of the invention. The PRO polypeptides and polynucleotides are useful for treating cardiovascular, endothelial or angiogenic disorders, e.g. myocardial infarction, cardiac hypertrophy, trauma, cancer or age-related macular degeneration, rand for polynucleotides are useful as hybridisation probes in chromosome and gene mapping and in generating antisense RNA and DNA, and for chromosome identification and tiseue typing. The PRO polypeptides and polynucleotides are also useful in gene therapy and as molecular weight markers for protein in gene therapy and as molecular weight markers for protein

The invention relates to human PRO polypeptides and the PRO polymorlectides encoding them. The invention also relates to treating polymorlectides encoding them. The invention also relates to treating cardiovascular, endothelial or angiogenic disorders in mammals, inhibiting endothelial cell growth, stimulating endothelial cell growth, stimulating angiogenesis or smooth muscle cell growth by administering polypeptides angiogenesis or smooth muscle cell growth by administering polypeptides of the invention. The PRO polympthides and polymuclectides are useful for treating cardiovascular, endothelial or angiogenic disorders, e.g. mycoradial infarction, cardiac hypertrophy, trauma, cancer or age-related macular degeneration. The PRO polymuclectides are useful as hybridisation probes in chromosome and gene mapping and in geneting antisense RNA and DNA, and for chromosome identification and tissue typing. The PRO polymptides and polymuclectides are also useful in gene therapy and as molecular weight markers for protein clear therapy and as molecular weight markers for protein polymuclectide of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             266 TIGGCAGITICIAACITGGGTITCTIGCTIACCCIGCCCTICIGGGCTCAIGCTG---- 320

New isolated antigenic peptides e.g., for G protein-coupled receptors
The present for diagnosing and designing drugs for treating conditions
In which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or
AX
The present invention describes antigenic peptides (1) comprising (a)
By Disclosure, Pig 1; 523pp; English.

The present invention describes antigenic peptides (1) comprising (a)
CCC any one of 1601 sequences (see ABP22019 to ABP83619) of 12-24 amino
CCC any one of 1601 sequences (see ABP22019 to ABP83619) of 12-24 amino
CCC and (2) an isolated antibody having high specificity and high affinity or
CCC and (2) an isolated antibody having high specificity and high affinity or
CCC and (2) an isolated antibody specifies for GPCRs are useful for detecting an
CCC antibody against a particular GPCR, (1) can be used as GPCR modulators and in
CCC antibody against a particular GPCRs, and in the production of specific
CCC antibody against a particular GPCRs, and in the production of specific
CCC presence or absence of corresponding GPCRs. The antipodies for
CCC GPCRs and antibodies are useful for diagnosing and designing drugs for
CCC GPCRs and antibodies are useful for diagnosing and designing drugs for
CCC GPCRs and antibodies are useful for diagnosing and designing drugs for
CCC GPCRs and antibodies are useful for diagnosing and designing drugs for
CCC GPCRs and antibodies are useful for diagnosing and designing drugs for
CCC GPCRs and antibodies are useful for diagnosing and designing drugs for
CCC GPCRs and antibodies are useful for diagnosing and designing drugs for
CCC GPCRs and antibodies are useful for diagnosing and designing drugs for
CCC GPCRs and antibodies are useful for disease, antibodies are
CCC disease, or autoimmune diseases, and important mental retardation, memory
CCC disease, Parkinson's disease, multiple aclerosis, pain, pserialsis,
CCC disease, Parkinson's disease, multiple aclerosis, pain, pserialsis,
CCC disease, pain and disease, multiple aclerosis, pain, pserialsis,
CCC disease, pain

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 1

(first entry)

05-NOV-2002 ABS52092;

Human; CCR12; gene; 88; chemokine receptor; CRAM-B; MCP-1; HEK cell; Monocyte Chemoattractant Proteán-1; brain glial cell; ischaemia; asthma; inflammatory disease; degenerative brain disease; Alzheimer's disease; multiple aclerosis; neurodegenerative disease; neuroinflammatory disease; allergic encephalitis; chronic obstructive pulmonary disease; obstructive airway disease; neuroprotective; antinflammatory. identifying compounds for treating inflammatory or degenerative brain 18-JAN-2002; 2002WO-NL000039. 18-JAN-2001; 2001EP-00200181. (UYGR-) RIJKSUNIV GRONINGEN. Biber K; WPI; 2002-599725/64. Human CCR12 cDNA. Boddeke EHWGM, WO200257779-A2 Homo sapiens. 25-JUL-2002.

The invention relates to identifying a candidate drug compound comprising testing the compound for its capacity to modulate or mimic Monocyte Chemoattractant Protein-1 (MCP-1) binding with a chemokine receptor Disclosure, Fig 8; 45pp; English.

diseases, comprises testing the compound for its capacity to modulate or mimic Monocyte Chemoattractant Protein-1 binding with a chemokine

```
ö
capable of being expressed on brain glial cells and is known in the mouse as L-CCR or in humans as CRAM-B. The chemokine receptor expressed in a cultured cell comprising the cell transfected with a nucleic acid and a HEK cell, is useful in identifying a candidate drug compound for treating inflammatory or degenerative brain disease, e.g. ischaemia, Alzheimer's disease or multiple sclerosis. The agonist or antagonist is useful in the preparation of the pharmaceutical composition useful in treating neurodegenerative and neuroinflammatory diseases such as allergic encephalitis and chronic observative pulmonary disease and obstructive anixary diseases such as allergic encephalitis and chronic observative pulmonary disease and obstructive anixary diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes human macrophage/dendritic cell chemokine receptor. Antibodies which bind to the protein can be used in detecting or diagnosing various immunological conditions related to expression of the protein. The nucleic acid can deed for screening and isolating DN clones for the chemokines, especially from other species. The chemokine can be used in the treatment of conditions associated with abnormal

The invention relates to nucleic acids encoding the chemokines TECK, MIP-3alpha, MIP-3beta, DC CR and M/DC CR. The polypeptide sequences are useful in isolating DNA clones encoding the chemokines, for generating antibodies, and for predicting oligomucleotides for screening a library to isolate species variants. A nucleic acid encoding a chemokine polypeptide can be used to identify genes, mRNA and cDNA species which encode related or homologous ligands, as well as DNA encoding homologous proteins from different species. The chemokines and antibodies which to the polypeptides are useful in the treatment of conditions associated with abnormal physiclogy or development, including inflammatory conditions such as asthma, abnormal polification, regeneration, degeneration and atrophy. This sequence represents cDNA encoding the human monocyte/dendritic cell receptor for chemokine (M/DC CR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The invention relates to a substantially pure or isolated polypeptide comprises the mature protein of human TECK (thywnus expressed chemokine) whose full length sequence appears as ADG67837. Also included are an isolated or recombinant nucleic acid encoding mature TECK, an expression vector comprising the nucleic acid, a host cell comprising the expression nector and a method for producing the polypeptide. Also disclosed are the mouse TECK cDNA and protein, human chemokines MIP-3alpha and MIP-3beta (and their encoding cDNAs), and the cDNAs and encoded proteins corresponding to human chemokine DCCR (dendritic cell receptor chemokine). The polypeptide is useful for treating conditions associated with abnormal physiology or development, including inflammatory receptors receptors MDCCR.
                                                                                                                                                                                                                                                        Human; 88; gene; thymus expressed chemokine; TECK; MIP-3alpha; MIP-3beta; chemokine receptor; DCCR; dendritic cell receptor for chemokine; M/DCCR; Monocyte/dendritic cell receptor for chemokine; abnormal physiology; development; inflammatory condition; asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual sequence of the sneed with an any one of the nucleic acids, where the presence of the SNP is correlated with an configuration in the individual. The invention further comprises an isolated nucleic acid molecule comprising at least correlation or its complement and encoding any one of the amino acid sequence given in the specification; an isolated polypeptide of that specification in the specification; an antibody comprising an amino acid sequence given in the specification; an antibody comprising an amino acid sequence given in the specification; an antibody comprising an amino acid sequence given in the specification; an amplified polymucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in concluding an amino acid sequence given in the specification and which is between about 16 and 1000 nucleotides in concluding an agent useful in treating or preventing an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and concluding an agent useful in treating or preventing or preventing or preventing or preventing an individual who has an increased or decreased risk for developing myocardial infarction. The sequence was not shown in the specification much of the invention or sequence was not shown in the specification. The sequence was not shown in the specification or the sequence has come from a electronic sequence listing downloaded from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism in the individual's nucleic acids.

The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's caltered risk for myocardial infarction in the individual. The invention further comprises an isolated nucleic acid molecule comprising at least schriber comprises an isolated nucleic acid molecule comprising at least schriber specification or its complement and encoding any one of the amino acid sequence given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an antibody comprising an amino acid sequence given in the specification; an antibody comprising the polypeptide or its antigen-binding fragment; an amplified polymucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in comprising the collenging an agent useful in treating or preventing an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and a nucleic acid molecule; a method of detecting a variant polypeptide; and myocardial infarction. The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The movel decreased risk for developing myocardial infarction and for preventing a composition for treating or preventing myocardial infarction. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          composition for treating or preventing myocardial infarction. This polymucleotide sequence represents a human myocardial infarction-seasociated gene containing one or more SNPs of the invention. Note: This sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism in the individual's nucleic acids.
                                                                                                                                                                            Myocardial infarction; detection; single nucleotide polymorphism; SNP; cardiant; gene therapy; human; gene; ds.

New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for Human, probe, 88, gene expression, single exon probe, microarray, alternative splicing event, genomic alteration. Human genome derived single exon probe #22780. Claim 1; SEQ ID NO 22780; 80pp; English. ACH89585 standard; DNA; 1140 BP 었 03-APR-2002; 2002US-00029386 03-APR-2002; 2002US-00029386 Hanzel (first entry) (PENN/) PENN S G. (RANK/) RANK D R. (HANZ/) HANZEL D K. WPI; 2004-119264/12 Penn SG, Rank DR, surveying tissues. US2003194704-A1. Homo sapiens, 29-JUL-2004 16-OCT-2003 ACH89585

The invention relates to a nucleic acid probe for measuring human gene sequences in the specification, or their complements or fragments, and sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acids sequences (c) claim at least 8 amino acids of any of the 6888 amino acids sequences (c) in the specification. The probe is a single acon probe that chybridises under high stringency conditions to a nucleic acid molecule expression (comprising a plurality of single exon nucleic acid probes for measuring human calls or tissues. Also included are a spatially.

CC daressable set of single exon nucleic acid probes for measuring human gene expression (comprising a plurality of single exon addressably isolatable or amplifiable from the plurality), a single con microarray for measuring human gene expression, a wector comprising the single exon probe cited above, where each of the plurality of probes is single exon microarray for measuring human gene expression, a vector comprising the single exon probes cited above, an ORP-encoded peptide comprising at least 8 contiguous amino acids of any of the above-mentioned amino acid solated antibody that binds specifically to a peptide cited above, methods of salling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing human gene expression data by subscription, and a computer-readable correspondent including data on the expression of a single exon microarrays.

CC ited above. The probe, methods and apparatus are useful in gene expression analysis. The probes may apparatus are useful in gene expression analysis. The probes may apparatus are useful in gene expression analysis. The probes are useful and characterising gross alterative splicing events, in detecting and characterising gross alterative splicing events, in detecting and characterising gross alterations in the probes are useful the sequence data for this adjunct of the probes of segdata.uspto.gov/sequence.html?DocID=20030194704

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô
                                                                                                                                                                                                                   ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to ABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic, antianglogenic, hypotenaive, vulnerary and antiarteriosclerotic activities, and can be used in gene therapy. The PRO polynucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenois, rheumatoid arthritis, angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polynucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88252 to ABL88267 represent primers and probes used in the

These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, may cardial infarctions, thrombophiebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a coding sequence of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded conditions and anticle acid, or an agonist or antagonist, is used to treat a cardiacoular, endothelial, or anatogonic disorder in a mammal, con has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy is characterised by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial coll growth in a mammal. PRO21 or an agonist is used to induce cardiac hypertrophy. PRO1376 or PRO1409 is used to stimulate angiogenesis. Chypertrophy. PRO1376 or PRO1409 is used to stimulate angiogenesis. Chypertrophy. PRO1376 or PRO1409 is used to stimulate angiogenesis. Chypertrophy in the specification, or an agonist is used to induce endothelial cell the formation. The present sequence represents a cDNA encoding a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The inventioh relates to an isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded cacid, or an agonist or antagonist, is used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, protectably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy is characterised by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial cell growth in a mammal. PRO21 or an agonist is used to induce cardiac hypertrophy. PRO1376 or PRO1499 is used to stimulate angiogenesis. PRO4302 or an agonist is used to induce endothelial cell apoptosis. A PRO polypeptide, given in the specification, or an agonist is used to induce endothelial cell upoptosis. A PRO polypeptide or inhibit smooth muscle cell growth, or to induce endothelial cell tube formation. The present sequence represents a cDNA encoding a CMC or an agonist is a cDNA encoding a CMC or an agonist cell tube formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            148

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded to by the nucleic acid, or an agonist or antagonist, is used to treat a cardiacoular, endothelial, or antagonist disorder in a mammal, preferably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy is cancer, or age-related macular an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial chypertrophy. PRO1376 or PRO449 is used to inhibit angiogenesis. Chypertrophy. PRO1376 or PRO449 is used to stimulate angiogenesis. Chypertrophy. PRO1376 or profice endothelial cell apoptosis. A PRO polypeptide, given in the specification, or an agonist is used to induce endothelial cell tube formation. The present sequence represents a cDNA encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antagonist, is used to treat a cardiovascular, endothelial, or anaglogenic disorder in a mammal, preferably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular or specification. The cardiac hypertrophy is characterised by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial cell growth in a mammal. PRO21 or an agonist is used to induce cardiac hypertrophy. PRO1376 or PRO1499 is used to stimulate angiogenesis. PRO4102 or an agonist is used to induce endothelial collypeptide, given in the specification, or an agonist is used to induce endothelial cell apoptosis. A PRO polypeptide, given in the specification, or an agonist is used to induce endothelial cell aboptosis. A PRO cell tube formation. The present sequence represents a cDNA encoding a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              용
                                                                                                                                                                                                   The invention relates to human PRO polypeptides and the PRO polynucleotides encoding them. The invention also relates to treating cardiovascular, endothelial or angiogenic disorders in mammals, inhibiting endothelial cell growth, stimulating endothelial cell growth, stimulating endothelial cell growth, inhibiting cardiac hypertrophy, cell apoptosis or cell tube formation and stimulating angiogenesis or smooth muscle cell growth by administering polypeptides of the invention. The PRO polypeptides and polynucleotides are useful for treating cardiovascular, endothelial or angiogenic disorders, e.g. myocardial infarction, cardiac hypertrophy, trauma, cancer or age-related macular degeneration. The PRO polynucleotides are useful as hybridisation probes in chromosome and gene mapping and in generating antisense RNA and DNA, and for chromosome identification and tissue typing. The PRO polypeptides and polynucleotides are also useful in gene therapy and as melecular weight markers for protein electrophoreals purposes. This sequence represents a human PRO polynucleotide of the invention.

The invention relates to human PRO polypeptides and the PRO polymucleotides encoding them. The invention also relates to treating polymucleotides encoding them. The invention also relates to treating cardiovascular, endothelial or angiogenic disorders in mammals, inhibiting endothelial cell growth, stimulating endothelial cell growth, stimulating endothelial cell growth by administering inducing cardiac hypertrophy, cell apoptosis or cell tube formation and polympeptides of the invention. The PRO polypeptides and polymucleotides are useful for treating cardiovascular, endothelial or angiogenic are useful for treating cardiovascular, endothelial or angiogenic clascular despensation, The PRO polymucleotides are useful as hybridisation probes in chromosome and gene mapping and in useful as hybridisation probes in chromosome and gene mapping and in generating antisense RNA and DNA, and for chromosome identification and tissue typing. The PRO polypeptides and for chromosome identification and tissue typing. The PRO polypeptides and for chromosome are also useful in gene therapy and as molecular weight markers for protein and electrophoresis purposes. This sequence represents a human PRO polymucleotide of the invention. Note: The sequence data for this patent is also available in electropic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GIGCCATCACTCTGCTCTGCTGTGTTTGTGATCGGTGTCCTGGACAATCTCCTGGTTGTG 180

THIS PAGE BLANK (USPTO)

```
capable of being expressed on brain glial cells and is known in the mouse as L-CCR or in humans as CRAM-B. The chemokine receptor expressed in a cultured cell comprising the cell transfected with a nucleic acid and a HER cell, is useful in identifying a candidate drug compound for treating inflammatory or degenerative brain disease, e.g. ischaemia, Alzhaimer's firstaamse or multiple sclerosis. The agonist or antagonist is useful in the preparation of the pharmaceutical composition useful in treating neurodegenerative and neuroinflammatory diseases such as allergic encephalitis and chronic obstructive pulmonary disease and obstructive airway diseases such as asthma. This sequence represents human CRAM-B cDNA, also known as CCR12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                540

Antibodies which bind to the protein can be used in detecting or diagnosing various immunological conditions related to expression of the protein. The nucleic acid can be used for screening and isolating DN clones for the chemokines, especially from other species. The chemokine can be used in the treatment of conditions associated with abnormal

The invention relates to nucleic acids encoding the chemokines TECK, MIP-Jalpha, MIP-Jbeta, DC CR and M/DC CR. The polypeptide sequences are useful in isolating DNA clones encoding the chemokines, for generating antibodies, and for predicting oligonucleotides for screening a library to isolate species variants. A nucleic acid encoding a chemokine polypeptide can be used to identify genes, mRNA and cDNA species which encode related or homologous ligands, as well as DNA encoding homologous proteins from different species. The chemokines and antibodies which to the polypeptides are useful in the treatment of conditions associated with abnormal physiology or development, including inflammatory degeneration and atrophy. This sequence represents cDNA encoding the human monocyte/dendritic cell receptor for chemokine (M/DC CR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; gene, 88; thymus expressed chemokine; TECK; chemokine; MIP-3alpha; MIP-3beta; dendritic cell receptor for chemokine; DC CR; M/DC CR; asthma; monocyte/dendritic cell receptor for chemokine; inflammatory condition; abnormal proliferation; degeneration; atrophy; antinflammatory, antiasthmatic; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New chemokines, TECK, MIF-3 alpha, MIP-3 beta, DC CR and M/DCCR, useful for treating conditions associated with abnormal physiology or development, including inflammatory conditions (e.g. asthma), and abnormal proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                        Human monocyte/dendritic cell receptor for chemokine (M/DC CR) cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gish KC, Schall TJ, Vicari A, Zlotník
